HCG what is it?

- Human Chorionic Gonadotropin (HCG) is present in a woman's urine during the first trimester of pregnancy.
- HCG releases fat into the body in order to provide enough calories to sustain a fetus.

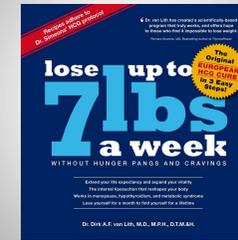

How is it used for weightloss?

HCG does not make you lose weight (the low calorie diet does), but it changes how you lose the weight!

The excess fat is taken out of storage and burned at a daily rate of 1,500 to 2,000 calories in energy, so you are definitely not hungry.

These fats are mainly stored around the thighs, buttocks and abdomen.

The HCG Treatment Program

And then there were weightdrops!

Contributes to normal fat metabolism

Ingredients: Water, choline (0.85 mg/ml), B12 (0.001 mg/ml), sodium benzoate.
Take 4 drops under the tongue, 2 times daily.

Rinse mouth 15 minutes before taking the drops.
Take 8 drops per day under the tongue:
4 drops on rising, and 4 drops after dinner.

Hold drops for 15 seconds before swallowing.
Now wait 15 minutes before doing anything else orally (e.g. cleaning teeth).

The W8drops Treatment Program 3 Easy Steps (1)

1: Losing weight, cleansing your body (with W8drops), moderate exercise. This is a safe and rapid weight loss Stage, while already adopting a healthy life style and instilling confidence that one can and does lose weight. The paradigm shift!

2: Stabilizing your weight, eating healthy, with more intensive exercise. This stabilization Stage is most important for the metabolism, because if you skip this part, you will gain more weight than you ever lost.

The W8drops Treatment Program 3 Easy Steps (2)

3: Staying healthy and vital for life

The permanent life style Stage, is based on:

- healthy beliefs
- healthy exercise and relaxation
- healthy food
- healthy hormonal support

Results

The results with my clients are amazing.
Here are some before and after pictures.
